## **CLAIMS**

## What is Claimed is:

- 1. A method for applying a coating to an item, the coating consisting in major part of a combination of zinc and chromium, characterized by exposing the item to an aqueous solution comprising effective amounts of hydroxyl ions (OH), Zn-containing ions, and Cr-containing ions and of rubidium ions (Rb<sup>+</sup>) in major part valence balancing the OH.
- 2. The method of claim 1 wherein:
  the amount of Rb<sup>+</sup> is in excess of combined amounts of Na<sup>+</sup> and K<sup>+</sup> in the solution; and
  the Cr-containing ions are present in major part as Cr(VI) ions.
- 3. The method of claim 1 wherein:
  the amount of Rb is in excess of combined amounts of other alkali metals in the solution.
- 4. The method of claim 1 wherein the solution has a pH of at most 13.0.
- 5. The method of claim 4 wherein the solution has a pH of between 11.0 and 13.0.
- 6. A method for coating an item characterized by: exposing the item to an aqueous solution comprising effective amounts of: hydroxyl ions (OH'); one or more ions of alkali metals, alkaline earth metals, or a combination
  - thereof other than Na, to in major part valence balance the OH;

    Zn-containing ions; and

    Cr-containing ions; and

applying a current to the through the item effective to plate exposed portions of the item with a coating consisting in major part of a combination of Zn and Cr codeposited with a flake-like morphology.

- 7. A coated item manufactured by the method of claim 1.
- 8. A method for treating a metallic surface comprising:

exposing the surface to an aqueous solution comprising effective amounts of Rb<sup>+</sup>, hydroxyl ions (OH<sup>-</sup>), Zn-containing ions and Cr-containing ions;

running a current through the surface so as to plate the surface with a coating consisting in major part of a combination of zinc and chromium.

5

- 9. The method of claim 8 wherein:
  - a step of providing the solution comprises introducing the Rb<sup>+</sup> in the solution as RbOH; the amount of Rb<sup>+</sup> is in excess of combined amounts of Na<sup>+</sup> and K<sup>+</sup> in the solution; and the Cr in the Cr<sup>-</sup>-containing ions is present in major part as Cr(VI) ions.

10. An aqueous electroplating solution for the codeposition of zinc and chromium comprising effective amounts of:

hydroxyl ions (OH<sup>-</sup>);

one or more ions of alkali metals, alkaline earth metals, or a combination thereof other than Na and K, to in major part valence balance the OH;

Zn-containing ions; and

Cr-containing ions.

- 11. The solution of claim 10 consisting essentially of a solution of:
  - 5-1300 g/l RbOH;
  - 0.1-125 g/l ZnO; and
  - 0.1-50 g/l Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>•2H<sub>2</sub>O.
- 12. The solution of claim 11 further comprising an amount of ammonium
- hexafluorosilicate effective to stabilize the solution so as to substantially prevent zinc hydroxide precipitation over a period of at least 3 days.
